This is what I have done, Inside my function the graph gets plotted on the screen at the end of the function. However, I want to do the following: 1. Access the graph before the data has been added on the screen. I want to hide the graph for 5 sec and after the 5 sec, I want to create an alert that shows the graph plotted from the beginning. 2. Change color of the axis when x-axis value is changed When the y-axis value changes to a particular value, the corresponding x-axis should change color as well. The Question: How do I
