Set up your STDU Explorer Activation Code filters to make finding your documents easy. The Explorer includes filters for popular file types and media types. If you have more than one filter set up, STDU Explorer Cracked Accounts displays the filter names instead of the actual file types, e.g. If you have set up two filters to search for JPEGs and ZIPs, STDU Explorer Crack For Windows will list only the first filter, 'JPEGs', instead of 'JPEGs, ZIPs'. Just click on the desired folder to open the Explorer. If you want to save the Explorer filter setup, click on the button 'save as template'. To change a filter or start STDU Explorer with a new filter, click on the button 'import filter'. The Explorer now shows the same filters that you have defined in the 'import filter' dialog. You can also drag files from the Explorer or the open Explorer view on your desktop to STDU Explorer and the files will be added to the Explorer as well as the current queue. You can remove files from the queue by selecting 'delete item' in the Explorer view or the Explorer. To start STDU Explorer with a specific selection of files in the Explorer, open the Explorer view and right-click on the desired files. To browse to a certain directory, open the Explorer view and drag and drop the files or folders to STDU Explorer. To move files from the Explorer view to STDU Explorer, right-click on the desired files and select the 'move item' function. To copy files from the Explorer view to STDU Explorer, open the Explorer view and right-click on the desired files. To paste files from STDU Explorer to the Explorer, open the Explorer view and right-click on the desired files in STDU Explorer. The Explorer view always stays the same in STDU Explorer. To toggle to the Explorer view, click on the button 'navigation view'. STDU Explorer can be used with any version of Windows and it will open and close files in double-byte or single-byte mode, according to the selected charset. There is also an option to export STDU Explorer to a shortcut on your desktop. STDU Explorer supports the import and export of filters.
